The authors regret a spelling error in Fig. 2. The last line in this figure should read ‘neurodevelopmental disorders’. Also, the odds ratio was plotted incorrectly for this outcome: it should be 1.29 with 95% confidence interval of 1.09–1.53. Furthermore, on page 214, in the second last paragraph the OR for allergic sensitisation should be 1.13 with a confidence interval of 1.00–1.28.

The authors apologise for any inconvenience caused.
